R39 Biodiversity Merged Resolution: We are Nature and Nature is us (and Green)

Proposer: Asia Pacific Greens Federation Council; Pacific Greens Network; Global Greens First Indigenous Nations Network; Green Party Papua New Guinea; Sarekat Hijau Indonesia (SHI); Nepali Greens; Greens Japan; Partido Verde Ecologista de México; Green Party of Canada; Europe Ecologie Les Verts (France)

## **Resolution text**

- Biodiversity is fundamental to a healthy planet, human well-being, and economic
- prosperity for all people. The United Nations has acknowledged biodiversity loss
- as one of the components of the triple planetary crisis. In order to prevent
- catastrophic consequences, humanity must reduce its impact on ecosystems andwildlife.
- <sup>6</sup> We, Green Parties and the Greens Movement resolve to include nature positive and
- nature focused solutions wherever possible, in our political manifestos and our
  governing policies.
- 9 We call the global leaders and the Greens:
- For the acceleration of the implementation of the Global Biodiversity
  Framework and its translation into national legislation everywhere
  possible, as fast as possible.
- For the facilitation of coalitions of Greens and beyond within civil
  society to push for more nature positive solutions, with the goal of
  supporting communities and their wellbeing.
- For the creation and mapping of more biological corridors worldwide, and ensuring the connectivity of transboundary ecosystems.
- 18 We the Greens support the Kunming-Montréal Global Biodiversity Framework's call 19 for the protection of 30% of biodiversity as set out in Target 3.
- 20 We the Greens support an amendment to Target 15 of the Kunming-Montréal Global
- 21 Biodiversity Framework which would make it mandatory for governments to require
- nature-related reporting in line with the Taskforce on Nature-related Financial
- 23 Disclosures.
- <sup>24</sup> We the Greens endorse focused long-term planning and financing to ensure the
- proper stewardship of key biodiversity: animal and plant species, waterways and
- <sup>26</sup> precious ecosystems that serve as bulwarks against extreme climate hardship.
- 27 We the Greens support the protection and growth of biodiversity in urban areas,
- 28 so as to ensure a link to Nature that provides wellbeing and a crucial
- <sup>29</sup> mitigation tool against extreme temperatures.
- We the Greens support investment in people and programs to transfer knowledge and nature positive solutions from country to country.
- <sup>32</sup> We the Greens support the protection of forest defenders and indigenous
- activists, too many of whom are subject to violence and sometimes death.

- <sup>34</sup> The link between biodiversity and climate change is clear: less biodiversity
- means more climate hardships, first and foremost for the peoples of the climate
- 36 frontlines.
- <sup>37</sup> We the Greens recognise and support the application and implementation of
- <sup>38</sup> Indigenous traditional knowledge and solutions, as they are now recognized by
- all, including the United Nations, as key to the preservation of biodiversity
- 40 worldwide.
- <sup>41</sup> We the Greens, affirm that each member party should develop policies to create
- <sup>42</sup> biological corridors and nature reserves in collaboration with other member
- <sup>43</sup> parties of Global Greens or other relevant organisations with the emphasis on
- <sup>44</sup> our connected transboundary ecosystems. Such coorperation will address border
- 45 conflicts and promote peaceful relationships.
